

EASY CARE LANDSCAPING

INSTRUCTIONS FOR TURF GRASS CARE

WATERING

Give your new lawn at least 1 in. of water within 1/2 hour of installation so that the soil underneath becomes very wet. Water daily, or more often, keeping turf moist until it is firmly rooted (about 2 weeks). Then less frequent and deeper watering should begin. Weather conditions will dictate the amount and frequency of watering. Be certain that your new lawn has enough moisture to survive hot, dry, or windy periods. Water areas near buildings more often where reflected heat dries the turf.

MAINTENANCE

Mow often, generally removing no more than 1/3 of the grass height at a mowing. Keep your mower blade sharp. Fertilizer and chemical applications will depend on climate, soil, insects, weed and disease conditions.

KEEP OFF GRASS

During the first couple of weeks after installation, keep traffic off your newly planted turf grass as much as possible. Your new turf grass needs time to firmly knit with the soil. If you have properly watered your turf grass it will be moist and soft. Traffic will create indentures and destroy your smooth grade.

ENJOY YOUR NEW LAWN!
